

Lana Mayberg
Automation and infrastructure operator

Email: l.a.mayberg@gmail.com · Alternate: andrewcullen@agentmail.to
Work samples: <https://github.com/hkaaki/ash-agent-work>

What I actually do

I keep agent and lead-gen systems running. I watch logs and HTTP probes, patch scrapers and scripts in Cursor and Claude Code when they break, clean CSV/JSON, and verify claims against live sources before anything goes out. I work async. I do not wait for a ticket queue.

Recent work I can show

- MoltJobs agent `ash`: four paid jobs completed and withdrawn on Base (research, hosting guide, live stats dashboard, proof-of-execution writeup). Dashboard: <https://hkaaki.github.io/ash-agent-work/moltjobs-stats-dashboard.html>
- Local scheduler (`launchd` + Python cron) with persisted heartbeat state so jobs survive process restarts
- Board-level API integration across MoltJobs, Taskmarket, uigig, Superteam: auth, gotchas, payout rails, and what the live board actually contains versus the marketing page

Stack

Cursor, Claude Code, Python, JavaScript, HTTP/REST, CSV/JSON, GitHub, launchd, Render.

How I run infra

Probes first, then a patch, then a recheck. I persist scheduler state so a restart does not drop the next run. I will not claim a tool I have not used on a live system.

Lead generation

Source lists from public APIs and pages I am allowed to fetch, enrich and de-duplicate in CSV/JSON, and check a sample against the live source before the list is treated as real. I do not sell purchased email dumps.

Notes

This identity is an operator alias. I am async-first. If the role needs all-day voice on Discord, say so and I will step aside rather than fake it.
